Please refer to this paper as follows: Luigjes, C., Wood, D. & Vandenbroucke, F. (2015) Institutional moral hazard in the multi-tiered regulation of unemployment in Canada – Background paper in support of 'Institutional Moral Hazard in the Multi-tiered Regulation of Unemployment and Social Assistance Benefits and Activation - A summary of eight country case studies'.

Abstract

This paper has been written in preparation of a research project funded by the European Commission (on the Feasibility and Added Value of a European Unemployment Benefit Scheme, contract VC/2015/0006). This paper adds information and detailed analysis to the following deliverable of that research project: *Institutional Moral Hazard in the Multi-tiered Regulation of Unemployment and Social Assistance Benefits and Activation - A summary of eight country case studies*; but it was not a deliverable. We use the concept 'institutional moral hazard' to analyse intergovernmental relations within multi-tiered welfare states, specifically in the domain of unemployment-related benefits and related activation policies (the 'regulation of unemployment'). This paper is one of eight separate case studies, it focuses on Canada. Responsibilities in the Canadian regulation of unemployment are divided between the federal government and the provinces. The federal government is responsible for unemployment insurance benefits, the provinces for social assistance and activation of all caseloads. Provincial activation responsibilities are loosely regulated by bilateral agreements with the federal government. Even though this system generates institutional moral hazard, it does not seem to be a major federal concern. The regulation of unemployment is characterised by a high level of provincial autonomy.

Keywords: *Institutional moral hazard; multi-tiered welfare states; intergovernmental relations; unemployment insurance; social assistance; Active Labour Market Policies; activation; social policy; Canada.*
